Loc-Line[®] nozzle flow rate testing was done using 21 elements of 1/4" Loc-Line[®] (approximately 1 foot). Please note that pressures for testing may not be suitable for all applications. Maximum pressures are affected by nozzle selection, length of hose and bending angles. Maximum pressures can be increased by using element clamps.

Flat Nozzle .060 5 Hole Part Number 41485

Loc-Line[®] nozzle flow rate testing was done using 21 elements of 1/4" Loc-Line[®] (approximately 1 foot).

Please note that pressures for testing may not be suitable for all applications. Maximum pressures are affected by nozzle selection, length of hose and bending angles.

Maximum pressures can be increased by using element clamps.

Flat Nozzle .040 7 Hole

Part Number 41486

Loc-Line[®] nozzle flow rate testing was done using 21 elements of 1/4" Loc-Line[®] (approximately 1 foot).
Please note that pressures for testing may not be suitable for all applications. Maximum pressures are affected by nozzle selection, length of hose and bending angles.
Maximum pressures can be increased by using element clamps.

2 1/2" Swivel Nozzle Part Number 41488

Loc-Line[®] nozzle flow rate testing was done using 21 elements of 1/4" Loc-Line[®] (approximately 1 foot). Please note that pressures for testing may not be suitable for all applications. Maximum pressures are affected by nozzle selection, length of hose and bending angles. Maximum pressures can be increased by using element clamps.

1" Straight Flow Nozzle Part Number 41489

Loc-Line[®] nozzle flow rate testing was done using 21 elements of 1/4" Loc-Line[®] (approximately 1 foot).

Please note that pressures for testing may not be suitable for all applications.

Maximum pressures are affected by nozzle selection, length of hose and bending angles.

Maximum pressures can be increased by using element clamps.

Flat Slot Nozzle .040

Part Number 41483

Loc-Line[®] nozzle flow rate testing was done using 21 elements of 1/4" Loc-Line[®] (approximately 1 foot).

Please note that pressures for testing may not be suitable for all applications.

Maximum pressures are affected by nozzle selection, length of hose and bending angles.

Maximum pressures can be increased by using element clamps.

Flat Slot Nozzle .060

Part Number 41484

Loc-Line[®] nozzle flow rate testing was done using 21 elements of 1/4" Loc-Line[®] (approximately 1 foot).
Please note that pressures for testing may not be suitable for all applications.
Maximum pressures are affected by nozzle selection, length of hose and bending angles.
Maximum pressures can be increased by using element clamps.

Round Nozzle 1/16"

Part Number 41402

Loc-Line[®] nozzle flow rate testing was done using 21 elements of 1/4" Loc-Line[®] (approximately 1 foot).

Please note that pressures for testing may not be suitable for all applications.

Maximum pressures are affected by nozzle selection, length of hose and bending angles.

Maximum pressures can be increased by using element clamps.

Round Nozzle 1/8"

Part Number 41403

Loc-Line[®] nozzle flow rate testing was done using 21 elements of 1/4" Loc-Line[®] (approximately 1 foot).

Please note that pressures for testing may not be suitable for all applications.

Maximum pressures are affected by nozzle selection, length of hose and bending angles.

Maximum pressures can be increased by using element clamps.

Swivel Nozzle .040 (Air)

Part Number 41481

Loc-Line[®] nozzle flow rate testing was done using 21 elements of ¼" Loc-Line[®] (approximately 1 foot).

Please note that pressures for testing may not be suitable for all applications. Maximum pressures are affected by nozzle selection, length of hose and bending angles.

Maximum pressures can be increased by using element clamps.

Swivel Nozzle .060 (Water)

Part Number 41482

Loc-Line[®] nozzle flow rate testing was done using 21 elements of 1/4" Loc-Line[®] (approximately 1 foot).

Please note that pressures for testing may not be suitable for all applications.

Maximum pressures are affected by nozzle selection, length of hose and bending angles.

Maximum pressures can be increased by using element clamps.

90° Nozzle 1/16" Part Number 41470

Loc-Line[®] nozzle flow rate testing was done using 21 elements of 1/4" Loc-Line[®] (approximately 1 foot).

Please note that pressures for testing may not be suitable for all applications. Maximum pressures are affected by nozzle selection, length of hose and bending angles.

Maximum pressures can be increased by using element clamps.

90° Nozzle 1/8" Part Number 41471

Loc-Line[®] nozzle flow rate testing was done using 21 elements of 1/4" Loc-Line[®] (approximately 1 foot).

Please note that pressures for testing may not be suitable for all applications.

Maximum pressures are affected by nozzle selection, length of hose and bending angles.

Maximum pressures can be increased by using element clamps.

90° Nozzle 1/4" Part Number 41472

Loc-Line[®] nozzle flow rate testing was done using 21 elements of 1/4" Loc-Line[®] (approximately 1 foot).

Please note that pressures for testing may not be suitable for all applications.

Maximum pressures are affected by nozzle selection, length of hose and bending angles.

Maximum pressures can be increased by using element clamps.

90° Spray Bar Nozzle Part Number 41473

Loc-Line[®] nozzle flow rate testing was done using 21 elements of 1/4" Loc-Line[®] (approximately 1 foot).

Please note that pressures for testing may not be suitable for all applications.

Maximum pressures are affected by nozzle selection, length of hose and bending angles.

Maximum pressures can be increased by using element clamps.

Round Nozzle 1/4"

Part Number 41404

Loc-Line[®] nozzle flow rate testing was done using 21 elements of 1/4" Loc-Line[®] (approximately 1 foot).

Please note that pressures for testing may not be suitable for all applications.

Maximum pressures are affected by nozzle selection, length of hose and bending angles.

Maximum pressures can be increased by using element clamps.

Flare Nozzle 1"

Part Number 41407

Loc-Line[®] nozzle flow rate testing was done using 21 elements of 1/4" Loc-Line[®] (approximately 1 foot).

Please note that pressures for testing may not be suitable for all applications.

Maximum pressures are affected by nozzle selection, length of hose and bending angles.

Maximum pressures can be increased by using element clamps.

1/4" Circle Flow Nozzle

Part Number 41479

Loc-Line[®] nozzle flow rate testing was done using 13 elements of 1/2" Loc-Line[®] (approximately 1 foot).

Please note that pressures for testing may not be suitable for all applications.

Maximum pressures are affected by nozzle selection, length of hose and bending angles.

Maximum pressures can be increased by using element clamps.

1/2" Circle Flow Nozzle

Part Number 51837

Loc-Line[®] nozzle flow rate testing was done using 13 elements of ½" Loc-Line[®] (approximately 1 foot).

Please note that pressures for testing may not be suitable for all applications.

Maximum pressures are affected by nozzle selection, length of hose and bending angles.

Maximum pressures can be increased by using element clamps.

Flat 5 Hole Nozzle .125

Part Number 51842

Loc-Line[®] nozzle flow rate testing was done using 13 elements of ½" Loc-Line[®] (approximately 1 foot).

Please note that pressures for testing may not be suitable for all applications.

Maximum pressures are affected by nozzle selection, length of hose and bending angles.

Maximum pressures can be increased by using element clamps.

Flat 7 Hole Nozzle .080

Part Number 51843

Loc-Line[®] nozzle flow rate testing was done using 13 elements of ½" Loc-Line[®] (approximately 1 foot).

Please note that pressures for testing may not be suitable for all applications.

Maximum pressures are affected by nozzle selection, length of hose and bending angles.

Maximum pressures can be increased by using element clamps.

Flat Slot Nozzle .125

Part Number 51841

Loc-Line[®] nozzle flow rate testing was done using 13 elements of ½" Loc-Line[®] (approximately 1 foot).

Please note that pressures for testing may not be suitable for all applications. Maximum pressures are affected by nozzle selection, length of hose and bending angles.

Maximum pressures can be increased by using element clamps.

Flat Slot Nozzle .080

Part Number 51840

Loc-Line[®] nozzle flow rate testing was done using 13 elements of 1/2" Loc-Line[®] (approximately 1 foot).

Please note that pressures for testing may not be suitable for all applications.

Maximum pressures are affected by nozzle selection, length of hose and bending angles.

Maximum pressures can be increased by using element clamps.

1 1/4" Flare Nozzle

Part Number 51807

Loc-Line[®] nozzle flow rate testing was done using 13 elements of 1/2" Loc-Line[®] (approximately 1 foot).

Please note that pressures for testing may not be suitable for all applications.

Maximum pressures are affected by nozzle selection, length of hose and bending angles.

Maximum pressures can be increased by using element clamps.

2 1/2" Flare Nozzle

Part Number 51809

Loc-Line[®] nozzle flow rate testing was done using 13 elements of 1/2" Loc-Line[®] (approximately 1 foot).

Please note that pressures for testing may not be suitable for all applications.

Maximum pressures are affected by nozzle selection, length of hose and bending angles.

Maximum pressures can be increased by using element clamps.

1 1/4" Straight Flow Nozzle

Part Number 51847

Loc-Line[®] nozzle flow rate testing was done using 13 elements of 1/2" Loc-Line[®] (approximately 1 foot).

Please note that pressures for testing may not be suitable for all applications.

Maximum pressures are affected by nozzle selection, length of hose and bending angles.

Maximum pressures can be increased by using element clamps.

1 5/8" Straight Flow Nozzle

Part Number 51848

Loc-Line[®] nozzle flow rate testing was done using 13 elements of 1/2" Loc-Line[®] (approximately 1 foot).

Please note that pressures for testing may not be suitable for all applications.

Maximum pressures are affected by nozzle selection, length of hose and bending angles.

Maximum pressures can be increased by using element clamps.

90° Nozzle 3/8" Part Number 51829

Loc-Line[®] nozzle flow rate testing was done using 13 elements of 1/2" Loc-Line[®] (approximately 1 foot).

Please note that pressures for testing may not be suitable for all applications.

Maximum pressures are affected by nozzle selection, length of hose and bending angles.

Maximum pressures can be increased by using element clamps.

90° Nozzle 1/2" Part Number 51830

Loc-Line[®] nozzle flow rate testing was done using 13 elements of 1/2" Loc-Line[®] (approximately 1 foot).

Please note that pressures for testing may not be suitable for all applications.

Maximum pressures are affected by nozzle selection, length of hose and bending angles.

Maximum pressures can be increased by using element clamps.

Round Nozzle 1/4"

Part Number 51806

Loc-Line[®] nozzle flow rate testing was done using 13 elements of 1/2" Loc-Line[®] (approximately 1 foot).

Please note that pressures for testing may not be suitable for all applications.

Maximum pressures are affected by nozzle selection, length of hose and bending angles.

Maximum pressures can be increased by using element clamps.

Round Nozzle 3/8"

Part Number 51802

Loc-Line[®] nozzle flow rate testing was done using 13 elements of 1/2" Loc-Line[®] (approximately 1 foot).

Please note that pressures for testing may not be suitable for all applications.

Maximum pressures are affected by nozzle selection, length of hose and bending angles.

Maximum pressures can be increased by using element clamps.

Round Nozzle 1/2"

Part Number 51803

Loc-Line[®] nozzle flow rate testing was done using 13 elements of 1/2" Loc-Line[®] (approximately 1 foot).

Please note that pressures for testing may not be suitable for all applications.

Maximum pressures are affected by nozzle selection, length of hose and bending angles.

Maximum pressures can be increased by using element clamps.

90° Nozzle 1/4" Part Number 51828

Loc-Line[®] nozzle flow rate testing was done using 13 elements of ½" Loc-Line[®] (approximately 1 foot).

Please note that pressures for testing may not be suitable for all applications.

Maximum pressures are affected by nozzle selection, length of hose and bending angles.

Maximum pressures can be increased by using element clamps.

90° Spray Bar Nozzle Part Number 51831

Loc-Line[®] nozzle flow rate testing was done using 13 elements of 1/2" Loc-Line[®] (approximately 1 foot).

Please note that pressures for testing may not be suitable for all applications.

Maximum pressures are affected by nozzle selection, length of hose and bending angles.

Maximum pressures can be increased by using element clamps.

2 1/2" Swivel Nozzle .075

Part Number 51845

Loc-Line[®] nozzle flow rate testing was done using 12 elements of 3/4" Loc-Line[®] (approximately 1 foot).

Please note that pressures for testing may not be suitable for all applications.

Maximum pressures are affected by nozzle selection, length of hose and bending angles.

Maximum pressures can be increased by using element clamps.

Round Nozzle 5/8"

Part Number 61503

Loc-Line[®] nozzle flow rate testing was done using 12 elements of 3/4" Loc-Line[®] (approximately 1 foot).

Please note that pressures for testing may not be suitable for all applications.

Maximum pressures are affected by nozzle selection, length of hose and bending angles.

Maximum pressures can be increased by using element clamps.

Round Nozzle 3/4"

Part Number 61502

Loc-Line[®] nozzle flow rate testing was done using 12 elements of 3/4" Loc-Line[®] (approximately 1 foot).

Please note that pressures for testing may not be suitable for all applications.

Maximum pressures are affected by nozzle selection, length of hose and bending angles.

Maximum pressures can be increased by using element clamps.

3" Flare Nozzle

Part Number 61507
